                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            HisteulysGlnGlnLeuAlaleuTyThrGluLysPheGluGluPheGlnAsnThrLeu 401
whether the comparison indicates a likelihood disease). (M1) is useful for identifying modulators of the p53 pathway. A probe for HM expression is useful for diagnosing breast, colon, kidney, lung and ovarian cancer, in a patient, where the cancer has greater than 25 % expression level. Modulators identified by (M1) are useful in a variety of diagnostic and therapeutic applications, where disease or disorder prognosis is related to defects in the p53 pathway, such as, anglogenesis, apoptotic or cell proliferation disorders (e.g. cancer). Another two new methods (M2 and M3) are useful for modulating the p53 pathway of a cell, thus restoring the p53 function of the cell, so that the cell undergoes normal proliferation or progression through the cell cycle. (M2) and (M3) are also useful for treating defects in the p53 pathway such as anglogenic, apoptotic or cell proliferation disorders. The present sequence is an HM nucleic acid encoding a p53 pathway modifying protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GluSerLeuCysArgGluLeuGlnArgHisAsnArgSerLeuLysGluGluGlyValGln 261
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             301

New human neurotransmission associated proteins (NTRAN), useful for diagnosing, treating and preventing diseases or conditions associated with the aberrant NTRAN expression e.g. cancer, AIDS, diabetes, epilepsy,

Claim 5; Page 230-231; 240pp; English

proteins given in ABR43271 to ABR43295, designated NTRAN-1 to NTRAN-25

(I). (I) have cytostatic, antiarteriosclerotic, anticonvulsant,

notropic, neuroprotective, cerebroprotective, anti-HIV, antiallergic,
antinflammatory, thyromimetic and antidiabetic activities, and can be
useful in diagnosing, treating and preventing diseases or conditions
associated with the decreased expression or overexpression of NTRAN, such
as cell proliferative (e.g. cancer, attoke), immune/inflammatory (e.g. AIDS,
allergies), developmental (e.g. hypothyroidism, Cushing's syndrome) or
endocrine (e.g. diabetes) disorders, or infections. They are also useful
in assessing the effects of exogenous compounds on the arguesion of
nucleic acid and amino acid sequences of NTRAN. The NTRANS or their
fragments are useful in screening compounds for effectiveness as agonist
or antagonist of the polypeptides, or in altering the expression of the
target polymucleotide and compounds that specifically bind to or modulate
the activity of the polypeptide

                                                                                                                                                         This cDNA clone, designated 091-132020 (ATCC 98143), which is not full-length, codes for a 46 kDa BRCA1 modulator protein (see AAW37883) that binds to the tumour suppressor gene product BRCA1, and which is characterised by a single leucine zipper domain. 3 cDNA clones (see also AAV29062-63) coding for BRCA1 modulator proteins (see AAW37881-83) were isolated from a Hela-CDNA library using a yeast two-hybrid assay with a GAL4-BRCA1(8-1293) fusion as bait. Vectors and host cells comprising the isolated nucleic acid sequences are claimed, as well as a process for producing BRCA1 modulator protein by culturing these host cells. BRCA1 modulator protein acids can be used to diagnose diseases involving unwanted cell growth, e.g. breast cancer, and to identify compounds that alter BRCA1 interaction with BRCA1 modulators for the

The present sequence encodes a modulator protein, that binds to and modulate the activity of the BRCA1 gene product (BRCA1). The BRCA1 protein has been characterized as a tumour suppressor protein.

Alterations in the amino acid sequence of BRCA1 causes breast and ovarian cancers by removing the controls on cell growth and proliferation. Research has shown that different regions on the BRCA1 molecule have different effects on cell growth and tumour suppression (e.g. full length truncated BRCA1 has no effect on breast cancer cell growth but will inhibit ovarian cancer cell growth. It has been suggested that different host cell factors (e.g. proteins) interact with different regions of the BRCA1 to control its function. The identification of these proteins (e.g. brothy) will facilitate the development of novel diagnostic methods and new therapeutics for identifying and treating cancers caused by changes in the expression or activity of BRCA1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     55 ----GCGACTGAGGCCGGACGGGACGGCGACGCGCAGCCGCGCGCAGAGTTTGAAAT 110

AAF22422 to AAF22626, AAF22627 to AAF22773 and AAF22774 to AAF23014 represent nucleotide sequences encoding human breast, gastric and prostate cancer associated antigen precursors (CAAP) respectively. AAB63467, AAB63468 to AAB63721 and AAB63722 to AAB63970 represent human breast, gastric and prostate CAAP protein sequence respectively. CAAPs have cytostatic activity and can be used in the production of cancer vaccines. The human CAAP proteins, peptides, nucleic acids or anti-CAAP antibodies are useful for diagnosing and treating a condition characterised by expression of an abnormal amount of a protein,

polynucleotides and polypeptides are useful in gene therapy, vaccines peptide therapy. The polypeptides have various cytokine-like activitieg. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity at activity, tissue growth factor activity, immunomodulatory activity at activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system discorders, arthritis inflammation. Note: The sequence data for this patent did not form pic of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

polynucleotides or polypeptides of the invention, and methods of identifying a compound which binds to a polypeptide of the invention. The invention further discloses methods of peventing, treating or meating a medical condition, kits comprising polynucleotide probes and/or monoclonal antibodies for carrying out the methods of the invention, methods for the identification of compounds that modulate the expression or activity of the polynucleotide and/or polypeptide, and 767 contig sequences corresponding to the conk sequences of the invention and ADC31861-ADC32627) and the polypeptides encoded by the contigs (ADC32628 (ADC33394). The nucleic acids and polypeptides of the invention are useful in diagnostics, drug screening, forensics, gene mapping, in the identification of mutations responsible for genetic disorders or other traits, for assessing biodiversity, and in producing many other types of data and products dependent on DNA and amino acid sequences. They are also used for treating diseases such as Parkinson's disease, Alzheimer's disease and other neurodegenerative diseases, anaemia, platelet
                                                                                                                                                                                                                                                                                                           disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or cancer. The nucleic acids may also be used as hybridisation probes or primers, and in the recombinant production of a protein. The polypeptides are also useful in generating antibodies, as molecular weight markers, and as food supplements. The present sequence represents a human contig sequence used in an example of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 266

New polynucleotide and polypeptide useful for diagnosing, preventing or treating conditions such as neurodegenerative diseases, anemias, platelet disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or

Claim 1; SEQ ID NO 724; 1185pp; English.

The invention relates to 971 novel human cDNA sequences (ADC29919-CADC3088) and the polypeptides they encode (ADC30890-ADC31860). The invention also relates to nucleic acid sequences over 99% identical with the novel human cDNAs. The invention additionally encompasses expression vectors and host cells comprising a mucleic acid of the invention, the recombinant production of a polypeptide of the invention; an antibody against a polypeptide of the invention; an antibody against a polypeptides of the invention; and methods of computation and invention in methods of the invention. The invention further discloses methods for the invention; and encoded of invention further discloses methods of peventing, treating or ampliorating a medical condition; Kits comprising polymucleotide probes and/or monoclonal antibodies for carrying out the methods of the invention conting sequences corresponding to the compounds that modulate the expression or activity of the polypucleotide and/or polypeptide, and 767 contig sequences corresponding to the cDNA sequences of the invention are contig sequences corresponding to the cDNA sequences of the invention of mutations responsible for general disorders or other contigs. And dispensely in the contist, for assessing biodiversity, and in producing many other types of data and products dependent on DNA and amino acid sequences. They are also used for treating diseases such as an analysis or and other mannoders and other mannoders and other mannoders and other mannoders and other mannoders. disease and other neurodegenerative diseases, anaemia, platelet disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or cancer. The nuclei acids may also be used as hybridisation probes or primers, and in the recombinant production of a protein. The polypeptides are also useful in generating antibodies, as molecular weight markers, and as food supplements. The present sequence represents a specifically claimed human cDNA sequence of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at tp.wipo.int/pub/published_pct_sequences.

The present sequence represents an expressed sequence tag (EST), and is a polymucleotide of the invention. The polymucleotides of the invention are all secreted EST sequences isolated from a variety of human tissue sources. The EST sequences and proteins encoded by them are predicted to have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, haematopoiesis regulating activity, tissue growth activity, activity, cancelly cativity, receptor/ligand activity, ununu inhibition activity, oadherin/tumour invasion suppressor activity, tumour inhibition activity. The EST sequences are also stated to be useful for gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 529 BP; 151 A; 146 C; 168 G; 64 T; 0 U; 0 Other;

WPI; 2003-156859/15. P-PSDB; ABO07223 Identifying modulators of the p53 pathway for use in treating apoptotic or cell proliferation disorders, comprises screening for agents that modulate activity of a human ortholog of genes that modify the p53 pathway in Drosophila.

Example 2; Page 320-351; 678pp; English.

The invention relates to identifying (M1) a candidate p53 pathway

modulating agent, by contacting an assay system comprising a purified HM

polypeptide (human orthologue of genes that modify the p53 pathway in

Drosophila) or nucleic acid with a test agent under conditions, where but

for the presence of the test agent, the system provides a reference

activity, and detecting a test agent-biased activity of the assay system.

Contacting a cell defective in p53 function with a candidate modulator

Also included are modulating (M2) a p53 pathway of a cell (comprising

Contacting a cell defective in p53 function with a candidate modulator

Contacting a cell defective in p53 function with a candidate modulator

Contacting a cell defective in p53 function with a candidate modulator

Contacting a cell defective in p53 function with a condidate modulator

Contacting a cell defective in p53 function with a condidate modulator

Contacting a cell defective in p64 function with a control, and (M3) a p53 pathway

Contacting a patient (comprising: (a) obtaining a biological sample

Expression; (c) comparing the results with a control; and (M1) is useful

Contacting defection in dicates a likelihood disease). (M1) is useful

Contacting addiagnosing breast, colon, kidney, lung and ovarian cancer,

in a patient, where the cancer has greater than 25 % expression level.

Contacting the p53 pathway, such as an disponentic and

therapeutic applications, where disease or disorder prognosis is related

Confects in the p53 pathway, such as an disponent or

Confects in the p53 pathway, such as angiogenic,

Confects in the p53 pathway or a cell, thus restoring

Confects in the p53 pathway or a cell, thus restoring

Confects in the p53 pathway or a cell, thus restoring

Confects in the p53 pathway or a cell, approached the cell or cell world effects in the p53 pathway or as angiogenic or

Confection or progression through the cell undergoes normal

Confection or reading a p53 pathway such as angiogenic or

Confection or cell proliferat

The DNA was isolated from a human genomic library by screening with LBP-3 cDNA (see AABS2601). The open reading frame spans 10 exons. Human LBP-2 nucleic acids are among claimed applymucleotides of the invention that encode more! polypeptides, termed LBPs, capable of binding to native and methylated LDL. Also claimed are isolated LBP polypeptides, and biologically active fragments and analogues of them, as well as biologically active fragments and analogues of producing the LBPs. Methods of determining if an animal is at risk for atherosclerosis, methods for evaluating an agent for use in treating atherosclerosis, and methods for treating a cell having an abnormality in structure or metabolism of LBP are claimed. Pharmaceutical compositions comprising an LBP polypeptide or nucleic acid, and vaccine compositions, are also claimed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated low density lipoprotein binding polypeptide for treating, diagnosing and/or identifying therapeutic agents for atherosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      MetlysAsnGlnAspLysLysAsnGlyAlaAlaLysGlnSerAsnProLysSerSerPro

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful a hybridisation probes, polymerase chain reaction (PCR) principal and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed activity of (II) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sieze expressing (II). (I) and (II) are useful for treating disorders polypeptide and polymeteses are useful in rectain gains involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher enkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABBS737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  detection reagent for detecting 1000 or more for elucidating cell signaling and cell-cell

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain creation (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed carivity of (II) as useful in gene therapy techniques to restore normal cativity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders of polypeptide and polymucleotide sequences have applications in polymucleotide sequences have applications in responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and among sequences. Abs&4197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this for the invention of the invention, but was obtained in the content trains to be appear in the printed specification, but was obtained in the content trains and sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    --GlnMetLysLeuLeuGlnLysL 216
                                  The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher elucatores for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins (ABBS70737-ABB72072). The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             88 ValAspAsnAsnGlnGlyGlyProGlyGlu---AspGlyAlaGlnGlyGluProAlaGlu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes an expressed sequence tag (EST), where the EST is an isolated, enriched, or purified nucleic acid sequence representing all or part of a gene, the expression of which, or its complementary sequence, in a cell identifies the cell as a developmentally competent or incompetent cell. Molecules which induce totipotence in one or more cells. Molecules which induce totipotence in one or more cells. Molecules which induce developmental none or more cells. Molecules which induce development in a cell line are useful for preventing a full term pregnancy in an animal and inhibiting totipotence. The molecules are also useful for treating a disease in an animal by inducing development of one or more cells of the animal into a specific cell type. The present sequence represents a bovine EST which is given in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GlyProGlySerSerGlnAlaProArgLysProGluGlyAlaGlnAlaArgThrAlaGln 64

The invention relates to an isolated polynucleotide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polynucleotide. The nucleic acid sequences are useful in diagnostics as expressed sequence tags (EST) for

identifying expressed genes or for physical mapping of the human genome, in forensias, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antibodies specific for it. The purified polypeptide is useful for generating antibodies specific for it. The present sequence is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                و

Primer sets for synthesizing polymucleotides, particularly the 5602 full length CDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length CDNAs.

Claim 1; SEQ ID NO 4742; 2537pp + Sequence Listing; English.

The present invention describes primer sets for synthesising 5602 fulllength cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dr primer and an oligonnclectide complementary to the complementary strand of a polynuclectide which comprises one of the 5602 nuclectide comprises at least 15 nuclectides; or (b) a combination of a polynuclectide which comprises a S-end sequence and an oligonuclectide comprising a sequence complementary to the complementary strand of a polynuclectide which comprises a S-end sequence and an oligonuclectide comprising a sequence complementary to the complementary strand of a polynuclectide which comprises a S-end sequence. Oligonuclectide which comprises a S-end polynuclectide which comprises a least 15 nucleotides and the combination of the S-end sequence(3'-end sequence's where the reapy and in gene therapy. The primer set scan be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynuclectides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers are also useful for AMH13612 and AMH13613 to AAH13612 and AMH13613 to AAH13622 to AAH13622 to AAH13622 to AAH13623 to AAH13623 to AAH13622 to AAH13623 to AAH13622 to AAH13623 to AAH oresent invention

New cardiovascular system related polynucleotides and polypeptides, useful for diagnosing, treating and/or preventing disorders of the cardiovascular system.

Claim 1; SEQ ID NO 467; 674pp; English.

Sequences AAS35126-AAS35740 represent cDNA molecules, which encode the cardiovascular system antigen polypeptides of the invention. Cardiovascular system antigens and their associated polyncleotides are useful in the diagnosis, treatment and prevention of various types of disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs, detecting the presence or absence of a mutation can be determined by detecting the presence or absence of a mutation in a cardiovascular system antigen polynucleotide. The treatable disorders include autoimmune sheaps such as rheumatoid arthritis, hyperproliferative disorders such as neoplasms of the breast or liver, cardiovascular disorders such as cardiac arrest, cerebrovascular disorders such as cardiac arrest, cerebrovascular disorders such as cardiac disorders such as Alzheimer's disease, infections caused by bacteria, viruses and fungi, ocular disorders such as corneal infection, endocrine disorders such as premature labour and infertility,

   renal disorders such
gastrointestinal disorders such as Crohn's disease, renal disorders such as glomerulonephritis and respiratory disorders such as asthma and pleurisy. The polypeptides can also be used to aid wound healing, to prevent skin aging due to sunburn, to maintain organs before transplantation, to regenerate tissues and in chemotaxis. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The invention relates to human cardiovascular system related polypeptides and the polynucleotides encoding them. The polypeptides, polynucleotides and antibodies to the polypeptides are useful for diagnosing a data data the polypeptides are useful for diagnosing a pathological condition or a susceptibility to a pathological condition, such as cancer of cardiovascular system tissues, proliferative disorders, foctal and developmental abnormalities, haematopietic disorders, diseases of the immune system, AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, neurological disorders (e.g., Alzheiner's disease, Parkinson's disease), cognitive disorders; controphrenia, asthma, skin disorders (e.g., psoriasis), sepsis, candorders, kidney disorders, gastrointestinal disorders, prequancy related disorders, endocrine disorders and infections. The nucleic acids are also useful for chromosome identification, radiation hybrid mapping or long-range restriction mamping. The polypeptides and polymucleotides may also be used as food additives or preservatives to increase or come of the control of the contr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   195 TCCCGGACCTATGTGGCAAAGGAATGGGGAGCCTTGAACCAACTTCCAKTAGTTCAATTGG 254

The invention relates to 2175 novel human ovarian antigens (ABP41054-ABP4228) and to CDMAs encoding them (ABD54131-ABD65305), and also encompasses polypeptides 99% identical and polynucleotides 95% identical to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigens polynucleotides, antibodies against human ovarian antigens, and the use of ovarian antigens polynucleotides and polypeptides in diagnosing, treating, prognosing or preventing various ovary and/or breast-related disorders. Such conditions include ovarian cancer and breast cancer, and metastatic tumours of ovarian or preast origin, reproductive system disorders (e.g., infertility, disorders of pregnancy, anovulation, polycystic ovary syndrome, ovarian orysts, and dysmenorinea, endocrine disorders, infertions (e.g., chlampadia, HIV, toxophasmosis, and toxic shock syndrome, ovary syndrome, conditions (e.g., mastitis, ophoritis and vaginately disorders, eurological disorders, gastrointestinal disorders respiratory disorders, neurological disorders, gastrointestinal disorders polynucleotides may also be used in screening for compounds which modulation or activity. The polynucleotides may further be used for gene therapy, chromesome mapping, in the control of individuals and in forensic analysis, and the control of individuals and in forensic analysis, and the control of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      usolated nucleic acid molecules encoding novel ovarian polypeptides, useful in the prevention, treatment and diagnosis of cancer (e.g. ovarian cancer), immune disorders, cardiovascular disorders and neurological diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            useful in disease diagnosis, drug targeting and phenotyping. The present sequence represents CDNA encoding a human ovarian antigen of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
PCOS; ovarian cyst, dysmenorrhoea; endocrine disorder; infection; inflammatory condition; immune disorder; blood disorder; cardiowascular disorder; respiratory disorder; neurological disorder; gene therapy; chromosome mapping; forenaci analysis; analysis; analysis; analysis; analysis; analysis; antibody preparation; cytostatic; immunomodulatory; neuroprotective; antiinflammatory; gynaecological; reproductive; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 1; SEQ ID NO 1238; 2922pp; English.

                                                                                                                                                                                                                                     632
                                                                                                                                                                                                                                                              LysIleGlnArg-LeuGluLysLeuCysArgAla-LeuGlnThrGluArgAsnAspLeuA 482
                                                                                                                                                                                                                                                                             The present invention describes an expressed sequence tag (EST), where the EST is an isolated, enriched, or purified nucleic acid sequence representing all or part of a gene, the expression of which, or its complementary sequence, in a cell identifies the cell as a developmentally competent or incompetent cell. Molecules which induce developmental competence in a cell line are useful for inducing totipotence in one or more cells. Molecules which induce developmental incompetence in a cell line are useful for preventing a full term
                                                                                                                                                                                                                             334 TTAAANGAAGCGACAGAATCGAGGCACAAATACGAACAAATGAAACAGCANGAAGTACAA

pregnancy in an animal and inhibiting totipotence. The molecules are also useful for treating a disease in an animal by inducing development of one or more cells of the animal into a specific cell type. The present sequence represents a bovine EST which is given in the exemplification of the present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            80
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 3 AsnGlnAspLysLysAsnGlyAlaAlaLysGlnSerAsnProLysSerSerProGlyGln 22
                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating call signalling and cell-cell interactions in higher eukaryotes for the development of insectioides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL3611), expressed DNA sequences (ABL018175) and the encoded proteins (ABB57737-ABR3727). The sequence date for this patent did not form part of the printed specification, but was obtained in electronic form part of the from WIPO at fip.wipo.int/published_pct_sequences
                                                                                              New isolated nucleic acid detection reagent for detecting 1000 or more
genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     23 ProGluAlaGlyProGluGlyAlaGlnGluArgProSerGlnAlaAlaProAlaValGlu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from brosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell.cell interactions in higher eukaryotes for the development of insecticidates, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL016176-ABL30511), expressed DNA sequences (ABL01640-ABL16175) and the encoded proteins (ABB57737-BAB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    5421 GAGGAGAAAGGTIGCTGTCGAGAAAGAGGAAAATGAAGAGAGAGGGCTGTTCCGATGGTCAAG 5362
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  23 ProGluAlaGlyProGluGlyAlaGlnGluArgProSerGlnAlaAlaProAlaValGlu 42
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           63 AlaGlnSerGlyAlaLeuArgAsp-----ValSerGluGluLeuSerArgGlnLeuGlu 80
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             81 AspileLeuSerThrTyrCysValAspAsnAsnGlnGlyGlyBroGlyGlu---AspGly 99
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 3 AsnGlnAspLysLysAsnGlyAlaAlaLysGlnSerAsnProLysSerSerProGlyGln 22
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        43 AlaGluGlyFroGlySerSerGlnAlaFroArgLysFroGluGlyAlaGlnAlaArgThr 62
                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                  Drosophila; developmental biology; cell signalling; insecticide;
                                                Drosophila melanogaster expressed polynucleotide SEQ ID NO 5522.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 13085 BP; 3189 A; 3159 C; 2921 G; 3816 T; 0 U; 0 Other;

Nucleic acids encoding bone marrow polypeptides, useful in diagnostic and

polypeptides. The nucleic acids and corresponding novel bone marrow polypeptides. The nucleic acids and corresponding proteins may be used in the prevention, diagnosis and treatment of diseases associated with the inappropriate bone marrow polypeptide expression. For example, to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of the polypeptides by expressing inactive proteins or to supplement the patient's own production of the polypeptides, by inserting the nucleic acids may be used to produce the polypeptides, by inserting the nucleic acids into a host cell and culturing the cell to express the protein. The nucleic acid and its complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acid sequences in samples, and therefore which patients may be in need of restorative therapy. The proteins may also be used as antigens in the production of antibodies against bone marrow proteins and

```
in assays to identify modulators of their expression and activity. The anti-bone marrow protein antibodies and antagonists may also be used to computate expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of the protein in samples cc (e.g. by enzyme linked immunosorbant assay (ELISA)). The proteins may be used to requlate haematopoiesis activity, and consequently in the creatment of myeloid or lymph cell disorders; in tissue regeneration, cc such as wound healing, as a nutritional supplement; and in treatment of immune disorders such as severe combined immunodeficiency (SCID)

```
The invention relates to a novel isolated NOV polypeptide. The polypeptide of the invention demonstrates cycostatic activity and may be used for determining the presence of, or predisposition to a disease associated with altered levels of expression of the polypeptide, including metabolic disorders, immune disorders, neurodegenerative disorders, circulatory diseases, haemopoletic disorders, wasting diseases and cancer. The polypeptide may also be utilised during gene therapy procedures, vaccine development and transgenic animal production. The current sequence is that of the human NOV DNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated NOVX polypeptide, useful for determining the presence of, or predisposition to a disease associated with altered levels of expression of the polypeptide, and for treating or preventing cancer.
                                                                                                                                                                                                                                                                                                                                                     Burgess CE, Casman SJ;

The present invention relates to a method for diagnosing breast cancer in a subject suspected of having endometrial cancer. The method comprises determining the expression of a set of human genes or expression products in an endometrial sample suspected of being cancerous. The human genes of characterised as high or low MAI (mitotic activity index). These sets of genes can be used to discriminate between high and low MAI breast tumours. The invention also provides DNA and protein microarrays for analysing the expression of the human genes and their products. The methods and arrays are useful for the diagnosis and prognosis of endometrial cancer, selecting and monitoring treatment regimes, and identification of compounds useful for the treatment of endometrial cancer. ABKAS5531-ABK35581 represent the human genes of the invention that are differentially expressed in breast cancer tissue
molecules or expression products that are differentially expressed in normal and malignant tissue.
                                                                                     Claim 1; Page 98-101; 219pp; English
